# Aii 2025 Issue Intake Survey

This survey serves as a way to gather input from a diverse set of stakeholders and interested parties across the infrastructure landscape. By highlighting the intersection of innovation and infrastructure, Aii brings dynamic research to bear to generate original and impactful resources and educational material.

Through this survey, Aii welcomes input from donors, industry leaders, public policymakers, academics, subject matter experts, trusted partners, and the interested public. We use the results to form a heat map for issues that demand attention. Through a process of staff review, feedback from our independent Advisory Council, and direction from our governing Board of Directors, we leverage third-party input to define our research objectives, resource allocation, and our research and educational content planning.

Participants may check as many boxes as they would like. Checking a box means this is a topic you believe demands more attention from an independent and objective research and educational perspective to inform industry leaders and public policymakers. Checked and unchecked items will still be covered within the Aii research and educational scope, but may receive different prioritization, depending on advisory feedback, team judgement, and current events.

# 2025 Issue Heat Map

# Survey Participant Demographics

**14%** Past or Present Donor

**14%** Newsletter Subscriber and General Audience Follower

**21%** Interested Public

**21%** Network and Informal Partnership (Aligned or mutual interest org)
